S2 SECURITY CORPORATION REACHES GROWTH MILESTONE WITH 1000th INSTALLATION OF S2 NETBOX

Recognizes Systems Integrator MAC Systems with Award of Recognition

WELLESLEY, MA — July 24, 2006 — S2 Security Corporation (S2) announced today that it has reached a new corporate growth milestone with the installation of the 1000th S2 NetBox security management system. S2 marked the occasion by presenting Bob McMenimon of MAC Systems, Inc. of Canton, MA with a recognition award. MAC Systems installed the 1000th S2 NetBox at Quadrant Software, a Boston-based software developer.

“We deliver our products through a network of systems integrators, and MAC Systems represents the level of quality of systems integrator we look for,” noted John L. Moss, CEO of S2 Security Corporation. “The 1000th system is important because it indicates that the S2 NetBox is meeting the industry’s demand for an open, scalable, and cost-effective physical security management solution.”

“The S2 NetBox has been a very successful product for us and we are honored to have been a part of this moment in S2’s growth,” said Bob McMenimon. “Customers come to us with very specific expectations, and it is up to us to find the right combination of products to meet those expectations. The S2 NetBox provides our customers with a cost-effective, scalable system that can be integrated with other products to meet their changing security needs.”

The S2 NetBox is an integrated security management system in a web-based network appliance; it does not require software installation on any PC. Offering access control, alarm monitoring, video management, identity management and other advanced capabilities, the S2 NetBox scales to handle the smallest single facility to global networks of related facilities.

S2 NetBox products are available by contacting S2 Security Corporation at <http://www.s2sys.com>.

About S2 Security Corporation

S2 Security Corporation, headquartered in Wellesley, Mass., is an innovator in the development of network-based integrated physical security systems supporting access control, alarm monitoring, temperature monitoring, video and intercom. S2’s flagship product is the S2 NetBox™, a network appliance that is a “security management system in a box” facilities of all types to manage their physical security needs from anywhere over IP networks.
